

Abstract of the Disclosure

A valve arrangement, which possesses at least one valve (3), which has a valve housing (5) provided with housing ducts. On opposite sides of the valve housing (5) there are first and second interfaces (18 and 19) for the fitting of a first and a second connection board (22 and 23). Each connection board comprises at least one connection duct communicating with a housing duct and is held on the valve housing (5) because on the one hand it is anchored by way of retaining means (36) on the valve housing (5) and on the other hand is fixed by means of attachment means (37) passing internally externally through the valve housing (5) on the oppositely placed second connection board (23).
